EXPERIENCE

Research Aide

Oct 2024 – Dec 2025

W. P. Carey School of Business, Arizona State University

Remote

- Developed an end-to-end GenAI-powered incident labeling platform (Python/Streamlit) featuring causal classification and multilabel taxonomy, significantly reducing repetitive manual labeling overhead by 80% across 2000 incidents.
- Designed a Hierarchical Cooperative Multi-Agent Human-in-the-loop architecture with verbalized sampling prompts, optimizing LLM orchestration and decreasing runtime by 90%.
- Built a multimodal trajectory prediction pipeline on the Waymo Open Dataset using Gemma-2-9B with LoRA fine-tuning and contextual prompt engineering, bridging multimodal reasoning with structured prediction.
- Migrated LLM experimentation workflows from Google Colab to AWS SageMaker Studio, improving reproducibility and scalability for enterprise-grade AI deployment.

EDUCATION

Master of Computer Science, Arizona State University

Expected Dec 2025

CGPA: 4.0. Relevant Coursework: Data Mining, NLP, Statistical Machine Learning, Data Processing at Scale.

PROJECTS

Anime Recommendation System

Jan 2026 – Feb 2026

LangChain · Groq · ChromaDB · Kubernetes · Docker · Streamlit · Grafana Cloud · Helm

- Built an end-to-end RAG pipeline over a ChromaDB corpus of 269 anime titles using LangChain and Groq LLM, enabling semantic anime search via Streamlit.
- Containerized with Docker and deployed to a Kubernetes (Minikube) cluster on GCP, ensuring scalability and reliability in a production-like environment.
- Reduced query latency by caching retriever pipelines and model initialization, eliminating redundant I/O.
- Integrated Grafana Cloud monitoring via Helm for real-time visibility into cluster health and resource usage.

Student Loan Repayment System

Oct 2025 – Oct 2025

React · FastAPI · MongoDB · Python

- Cut manual data entry by 90% by building an AI-assisted CSV importer with automated column mapping and a full-stack loan platform featuring AI loan calculations.
- Delivered a conversational AI chatbot with flow management and state-specific tax logic to personalize loan payoff projections.
- Achieved sub-second p95 responses across admin and employee portals via async REST APIs and optimized state management.

SKILLS

GenAI & LLMs

RAG Pipeline Design, Prompt Engineering, LLM Orchestration, Agents, LoRA Fine-tuning

Programming

Python (Proficient), C++, Java, SQL, Bash

Cloud & DevOps

AWS SageMaker, GCP, Docker, Kubernetes, Helm, Grafana, Prometheus

Data Systems

Vector Databases (ChromaDB), MongoDB, Neo4j, Kafka
