EXPERIENCE

Research Aide W. P. Carey School of Business, Arizona State University	Oct 2024 – Dec 2025 <i>Remote</i>
- Developed an end-to-end AI incident labeling platform (Python/Streamlit) with causal classification, multilabel taxonomy support, and batch annotation, reducing repetitive manual effort by 80% across 2000 incidents. - Designed a Hierarchical Cooperative Multi-Agent Human-in-loop architecture with verbalized sampling prompts, increasing model efficiency by decreasing runtime by 90%. - Built a multimodal trajectory prediction pipeline on the Waymo Open Dataset using Google Gemma-2-9B with LoRA fine-tuning, integrating image-to-text encoding and intent prediction to achieve a benchmark score of 7.36. - Migrated LLM codebase from Google Colab to AWS SageMaker Studio, enhancing scalability, reproducibility, and environment consistency for AI-driven systems.	

EDUCATION

Master of Computer Science , Arizona State University Relevant Coursework: Natural Language Processing, Data Mining, Statistical Machine Learning, Data Processing at Scale.	Dec 2025
--	----------

PROJECTS

Anime Recommendation System (LLMOps) Python · LangChain · Groq · ChromaDB · Kubernetes · Docker · Helm · Grafana Cloud	Jan 2026 – Feb 2026
- Built an end-to-end RAG-based recommendation system over a ChromaDB vector database using LangChain and Groq LLM, enabling efficient semantic search and retrieval. - Containerized with Docker and deployed to a Kubernetes cluster on GCP, ensuring reliability and scalability in a production-like environment. - Reduced query latency by caching retriever pipelines and model initialization, eliminating redundant I/O. - Integrated Grafana Cloud monitoring via Helm for real-time visibility into cluster health and system performance.	
Student Loan Repayment System React · FastAPI · MongoDB · Python	Oct 2025 – Oct 2025
- Cut manual data entry by 90% by building an AI-assisted CSV importer with automated column mapping and a full-stack platform featuring real-time analytics. - Delivered a conversational AI chatbot with flow management and state-specific logic to personalize loan projections and optimize employer-match strategies. - Achieved sub-second p95 responses across admin and employee portals via async REST APIs and optimized state management in React.	

SKILLS

AI & ML	PyTorch, Hugging Face, RAG pipelines, LLM frameworks, LoRA fine-tuning, Multimodal
Languages & Backend	Python, C++, Java, SQL, Bash, FastAPI, Django, Streamlit, React, REST APIs, MongoDB
Cloud & DevOps	AWS, GCP, Docker, Kubernetes, Helm, CI/CD, Grafana, Prometheus, SageMaker
Core Competencies	Distributed Systems, LLMOps, Agentic Reasoning, Mathematical Fluency (Vectors, Matrices)
